

The Leader in Edge Computing for Retail & Hospitality

Reliant delivers a scalable and proven Edge Platform bringing the power of the Cloud inside the four walls of your store or restaurant

Where the Cloud Meets The Physical World

As more and more applications and data are moved into the cloud, there is a growing realization that some software components are best run closer to the users and consumers of those applications and data.

Edge computing is a distributed computing topology in which applications and content are placed closer to the things or people that produce and/or consume that information, addressing the limitations of "cloud only" computing.

As a natural extension of the cloud, edge computing addresses the limitations of the "cloud only" computing by reducing latency, providing continuous operations, and accelerating digital transformation by moving complex and mission critical digital, IoT and customer engagement technologies into the edge.

A Market Leader in Edge Computing for Retail & Hospitality

We designed our platform based on our deep industry expertise in the hospitality and retail industries where customer engagement, digital innovation and immersive experiences are required. Digital transformation is top of mind for these industries where the digital and physical are converging. Reliant's scalable platform centralizes, automates, and controls application and content delivery, management, and security on-premise, in stores and restaurants.

The Reliant Edge Strategy Focuses on The Applications and Devices That Best Fit at The Edge

- Mission critical applications requiring constant uptime whether cloud connectivity is available or not
- Latency-sensitive applications requiring high productivity for your staff and customers
- Systems that require complex orchestration across multiple IoT devices
- Applications that generate or consume significant content and data
- Legacy applications that do not run well in the cloud
- Applications using sensitive data between a physical location to the cloud, requiring strong compliance & security

How it Works

Reliant Platform Manager

An easy to use web-based management system configuration, orchestration, and management of Reliant Edge Platform and hosted applications

This is a multi-tenant environment provisioned in Reliant's AWS cloud that is the core management system for edge platforms. It supports both interactive users and API access.

Management Plane

Dedicated servers deployable in Reliant's cloud, or a customer's data center or cloud for configuration, monitoring, and central log collection and analysis

These servers are typically provisioned by the client and are dedicated on a per client basis. They are often hosted in a client's cloud environment.

Reliant Edge Platform

In-Store component to efficiently deliver and manage applications and systems. Reliant Edge Platform delivers networking and security at web scale.

Reliant's **software** works with **off-the-shelf hardware**

Reliant's Edge Platform runs in remote locations. Reliant provides software to run on client provided hardware or can deliver the solution as a hardware/software bundle.

Bolster Benefits for Enterprise Users & Customers

Save Time & Gain Productivity Across All Fronts

IT, Infrastructure, Support

Centrally manage tens of thousands of distributed edge platforms, applications, operating systems across stores, restaurants, brand offices, and facilities

Operations

Gain Continuous Operations and high productive applications in store and restaurant

Employee & Customer Experience

Deliver Immersive Experiences with digital, contactless technology, IoT, actionable and secure data

Gain Agility & Flexibility with a Hardware & OS Agnostic Solution

IT, Infrastructure, Support

Create your own Edge configurations across different commercial off-the-shelf hardware. Open Architecture with API's ensure minimized integration effort

Operations

Remove barriers of older hardware to delivering new innovation in stores & restaurants. Minimized integration provides faster time to delivery

Employee & Customer Experience

Employees gain access to new technology & digital data faster. Provide new customer services & interaction expected in today's environment

Achieve Faster Time To Market

IT, Infrastructure, Support

Manage both legacy & new digital apps from a centralized platform; deliver IoT and innovation faster pre-built, mature platform rich in services and tools vs. building your own

Operations

IoT simplifies operations and provides actionable data for new services such as curbside pickup, BOPIS, ROPIS, etc. Quickly deploy and test new technology with low risk.

Employee & Customer Experience

Convenience for customers drives loyalty and repeat business. Safety protocols for contactless technology ensure customer satisfaction

Attain Increased Cost Savings

IT, Infrastructure, Support

Centralized IT staff vs. remote support. Less hardware & networking required, reducing overhead costs.

Operations

Remove operational costs in-stores & gain higher productivity and up-time

Employee & Customer Experience

Focus employees time on customer engagement & services

We Know Buy Vs. Build is Always Top of Mind for IT Professionals

Reliant has combined our deep industry knowledge with our Cloud + Edge expertise to provide a proven and hardened platform to build onto for a faster time to market advantage to meet the needs of today's connected consumers.

Industry leading out-of-the-box tools are embedded in our platform to allow our clients to immediately start to build on top of our platform to deliver quickly and securely.

Due to the impact of COVID-19, retailers and restaurant operators have had to pivot to deliver their digital transformation and roadmap in a matter of months. The Reliant Edge Computing Platform empowers your IT organization to support their internal business partners, employees and customers in a cost-effective approach that does not require a "big-bang" approach to innovation.

Reliant's professional services organization supports our clients in retail and hospitality from assistance to define your edge strategy to deployment, identifying the best fit applications and best architecture and deployment for your edge infrastructure.

Create a Digital-Ready Infrastructure & Achieve Faster Time-to-Market

Reliant's Edge Computing Platform is a fully developed and market proven solution, ready-to-deploy platform, built with industry leading tools to support highly distributed environments through virtualization, containerization, centralized management, and comprehensive monitoring and security. The Reliant Edge Platform can be configured as either single nodes or in multi-node high availability clusters.

Reliant's solution converges digital and legacy systems, capable of supporting both traditional client/server architectures and new microservice-based applications in an integrated and highly scalable system. Reliant's platform is hardware agnostic, designed to work with either in-place hardware or as part of a new deployment. Reliant supports application delivery via both lightweight containers, including Docker, and whole OS virtualization on the same physical system.

Differentiated from solutions that are solely open source, the Reliant Platform includes both edge and cloud-based components, available in SaaS or PaaS. The platform is fully hardened from a security perspective, including all necessary network functionality, and has pre-built integrations to a wide variety of leading retail and hospitality 3rd party applications for a faster time to market advantage.
