### TOP 5 INNOVATIVE FEATURES:

- Location-based Mobile Ordering and Delivery
- Device-agnostic for Flexible Guest Interaction
- Increased Revenue Opportunities for F&B and Retail
- Integration with InfoGenesis® POS and KDS Tools
- Secure Payments with rGuest® Pay

## Mobile Ordering on Any Device

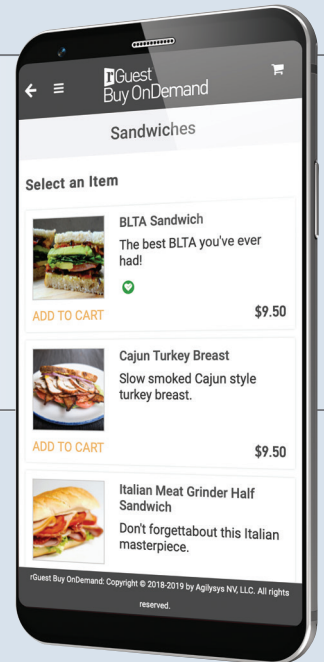

With the expansion of mobile technology in hospitality, savvy consumers expect premium service while hospitality venues want to serve more guests without compromising service levels or staff workflows. It's no secret the smartphone has changed the way we live. It's also having a profound effect on the way guests order and pay for things like food, drinks and retail items.

**“With a quick QR Code scan, rGuest Buy OnDemand allows guests to place orders from anywhere across the property.”**

rGuest® Buy OnDemand allows guests to place and pay for orders using their own device – phone, tablet or laptop. With a quick QRC scan, it's easy to order from anywhere across the property. At the pool, in the lounge, on the golf course or in the guest's room, the technology uses location-based codes, table numbers or room numbers to designate where to deliver guest orders. The high demand for prompt service can be challenging to meet. Fortunately, on-demand purchasing technology is creating new revenue opportunities that simply weren't possible until today.

Finally, instant mobile ordering for a premium guest experience. Now that's service!

Visit [PureHospitality.Agilysys.com](http://PureHospitality.Agilysys.com) to learn why Agilysys is the leader in hospitality technology for more than 40 years.

## Appetize

### PRODUCT NAME:

Enterprise, Cloud-Based  
POS Platform

### PRODUCT NAMES:

- Activate Quick Service
- Activate Table Service
- Interact Kiosk
- Interact Mobile API
- Interact Web
- Connect

### WHAT IS THE TECHNOLOGY/SOLUTION TYPE?

#### TOP 5 INNOVATIVE FEATURES:

- Complete Enterprise Management
- Ingredient-Level Inventory Management
- Omnichannel Technology: POS, Handhelds, Kiosks, Mobile & Online Ordering
- Open API
- Real-Time Insights & Analytics

### EXISTING CUSTOMERS FOR THIS TECHNOLOGY INCLUDE:

- Multi-chain operators in quick service, casual & full-service dining
- Amusement & attraction operators

# The POS Platform For The Modern Restaurant

Appetize is a modern point of sale, inventory and analytics company transforming how restaurants manage and process guest transactions. Its revenue-generating platform includes fixed terminals, handheld devices for tableside ordering, self-serve kiosks, and mobile and online ordering options that seamlessly sync with a dynamic and easy to use kitchen display system. Advanced analytics, inventory management, and ingredient-level reporting give powerful insights into how efficiently your restaurant is running.

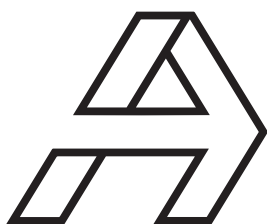

**Customers see up to a  
40% increase in order  
size when using kiosks**

**Improve Front Of House Efficiency With Easy To Use POS.** Appetize's image-driven interface reduces the number of steps it takes to place an order whether that's at a counter or at the table. Customize menu items with detailed descriptions that contain allergen information, create advanced modifiers, build combo offerings, and embed upsells into every transaction. With automatic offline mode, restaurants can continue to take orders even with slow connectivity or outages.

**Increase Revenue With Guest Ordering Solutions.** Enable guests to order how they want with kiosks, mobile, or online solutions. Appetize's software guides guests through the ordering and payment process with menu images, detailed descriptions, advanced modifiers, upsell pairings, and payment guidance. Embed Appetize's technology directly into an existing mobile application using its Mobile API or offer appless, web-based ordering from a simple URL.

**Manage Operations In Real-Time.** With Appetize Connect, restaurants manage all back of house operations from a centralized web-based platform. Monitor inventory levels to know what needs replenishment and where, track sales to understand top menu items, combos, or modifiers, and change price-levels across the entire operation, all in real time.
